Current water heater must be installed to code. All water heaters that are in areas where water damage can occur are required to have a corrosion resistant pan under them piped to the outside of the home per the manufacture's written installation instructions. The temperature pressure relief line must be piped to the outside of the home unless it is impossible without it going uphill (code requirement). A city, county or state permit is required. You can obtain one yourself or we can do it for you. All of our water heaters come with up to a 10 year all parts and labor guarantee when we provide the manufacture required yearly maintenance.

Print this coupon out and present it at the time of installation. You must order your water heater and tell the dispatcher that you have this coupon to qualify when requesting service. Has no cash value. Cannot be combined with any other offer or coupon.
